Aim:

Write a program on method overloading

Source Code:

Sample.java

```java
class Overload
{
    public void display(char ch)
    {
        System.out.println(ch);
    }
    public void display(char ch,int i)
    {
        System.out.println(ch+" "+i);
    }
}
class Sample
{
    public static void main(String args[])
    {
        Overload o = new Overload();
        o.display('a');
        o.display('a',10);
    }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
a
a 10
